                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | O-413) Paper No(s).<br>It Application (PTO-1                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                             |  |  |  |  |

#### DETAILED ACTION

### Election/Restrictions

Newly submitted claims 24 - 34 are directed to an invention that is independent or distinct from the invention originally claimed for the following reasons: The newly submitted claims are directed to a method of making a skin attachment member, rather than to a skin attachment member.

Since applicant has received an action on the merits for the originally presented invention, this invention has been constructively elected by original presentation for prosecution on the merits. Accordingly, claims 24 – 34 are withdrawn from consideration as being directed to a non-elected invention. See 37 CFR 1.142(b) and MPEP § 821.03.

## WITHDRAWN REJECTIONS

2. The 35 U.S.C. 112 second paragraph rejection of Claim 19, of record on page 2 of the previous Action, is withdrawn.

### **NEW REJECTIONS**

## Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 09/440,384

Art Unit: 1772

4. Claims 2 – 12, 16 – 23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Reed et al. (U.S. Patent No. 5,312,456).

With regard to Claim 19, Reed et al. disclose an array (plurality) of surfaces having a pointed shape (therefore a tip; column 3, lines 16-22; column 60-66) which is used to pierce (penetrate) skin (column 4, lines 28-32) formed of one of a group of materials which includes plastic (column 3, lines 40-42). It would therefore be obvious for one of ordinary skill in the art to form the surfaces from plastic, as plastic is included in the group of materials from which the surfaces is formed; the skin attachment member is therefore a skin attachment member of plastic resin, and is configured to penetrate into the epidermal skin layer; the skin attachment has a sheet form backing from which the penetrating elements extend integrally (base; column 7, lines 26-27), and is used as a bandage (column 5, lines 21-26); the skin penetrating elements include a retention barb extending from an outer surface of the skin penetrating element (a barb which bonds with skin; column 4, lines 28-34); the skin penetrating elements are integral with the backing (column 3, lines 32-34) and are made of a rigid material comprising plastic (column 3, lines 39-41); the claimed aspect of the 'array of skin penetrating elements' being formed 'integrally from a single plastic resin' therefore reads on Reed et al.

With regard to Claim 4, the surfaces of the skin penetrating elements have pointed shapes (column 3, lines 16 - 22; column 60 - 66), and therefore, pointed tips.

With regard to Claim 10, each skin penetrating element includes two barbs (column 3, lines 60 – 66, Figure 6).

With regard to Claim 16, the scope of the claim falls within the limitation of Reed et al. as discussed above. The process of making the skin attachment member (product – by – process)

is given little patentable weight. Applicant would need to demonstrate, by verified showing, the unexpected advantages accruing from making the elements by molding as claimed.

With regard to Claim 17, the skin penetrating elements have pointed shapes, and therefore define depressions on the surface.

With regard to Claim 20, as stated previously, the penetrating element has a pointed shape; it therefore tapers continuously from the base to the tip.

With regard to Claim 21, Reed et al disclose barbs having a length ranging from 4-18  $\mu$ m high (column 6, lines 11-28); the claimed aspect of the skin penetrating elements being disposed at different distances from the backing therefore reads on Reed et al.

With regard to Claim 23, as stated previously, the barb extends from the outer surface of the penetrating element; it therefore has a lower surface disposed substantially perpendicular to a central axis of the skin penetrating element from which it extends.

With regard to Claims 2 – 3 and 22, Reed et al. fail to disclose a skin penetrating element comprising a cone – shaped body having a diameter of about 0.003." However, Reed et al disclose a pointed solid triangular body having a width of 4 – 18 µm (column 6, lines 11 – 28). It would have been obvious for one of ordinary skill in the art at the time Applicant's invention was made to have provided for a skin penetrating element comprising a cone – shaped body having a diameter of about 0.003," since the modification would have involved a mere change in shape. A change in shape is generally recognized as being within the level of ordinary skill in the art. *In re Dailey, 357 F.2d 669, 149 USPQ 47 (CCPA 1966)*.

With regard to Claims 5-9, 11-12 and 18, Reed et al. fail to disclose a skin penetrating element having a diameter of 0.003", and a skin penetrating element having a length of 0.012"

Application/Control Number: 09/440,384

Art Unit: 1772

and a backing having a thickness of 0.003 to 0.008", and a retention barb which is 0.008" to 0.0095" from the backing, and a retention barb with a length of 0.0001", and a retention barb which tapers from a thickness of 0.0001" to a point at an angle of 72 degrees, and a skin attachment member having a density of 400 skin penetrating elements in a 0.1 in<sup>2</sup> area and the elements are spaced apart from each other a distance of 0.003 inches, and the elements perpendicular to the backing. However, Reed et al disclose a skin penetrating element having a diameter of greater than 0.1 µm (column 6, lines 61 – 65), and a skin penetrating element having a length of  $4-18 \mu m$  long (therefore  $4-18 \mu m$  from the backing; column 6, lines 11-28) and a backing having a thickness of at least a fraction of 1 µm (the element comprises a backing; column 3, lines 32 - 34), and a retention barb with a length of 12  $\mu$ m, and a retention barb which tapers from a thickness of 0.1 µm to a point at an angle of at least 1 degree from the thickness to a pointed piercing barb, and a skin attachment member having a density of 200,000 skin penetrating elements in a 1 cm $^2$  area (column 6, lines 61 – 65) and the elements are spaced apart from each other a distance of at 4-18 mm (column 6, lines 11-28). Therefore, the diameter, length and angle of point of the penetrating element, the thickness of the backing and the number of elements per area would be readily determined through routine optimization by one having ordinary skill in the art depending on the desired end use of the product. It therefore would be obvious for one of ordinary skill in the art to vary the diameter, length and angle of point of the penetrating element, the thickness of the backing and the number of elements per area, since the diameter, length and angle of point of the penetrating element, the thickness of the backing and the number of elements per area would be readily determined through routine optimization by

Art Unit: 1772

one having ordinary skill in the art depending on the desired end result as shown by Reed et al, in the absence of unexpected results. *In re Boesch and Slaney, 205 USPQ 215 (CCPA 1980)*.

5. Claim 13 is rejected under 35 U.S.C. 103(a) as being unpatentable over Reed et al. (U.S. Patent No. 5,312,456) in view of Fye (U.S. Patent No. 5,031,609).

Reed et al disclose a skin – attachment member as discussed above. With regard to Claim 13, Reed et al. fail to disclose a skin attachment member comprising nylon.

Fye teaches the use of nylon in the making of bandages, for the purpose of making bandages which are light – weight and hand – washable (column 2, lines 34 – 39).

Since Reed et al and Fye, both, teach fastening to skin (column 5, lines 21 – 26 of Reed et al; column 2, lines 34 – 39 of Fye) one of ordinary skill in the art would have recognized the usage of nylon for making bandages which are light – weight and hand – washable, to use repeatedly by washing as taught by Fye, to save money.

It therefore would have been obvious for one of ordinary skill in the art at the time Applicant's invention was made to have provided for nylon in Reed et al. in order to make bandages which are hand – washable as taught by Fye.

6. Claims 14 – 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Reed et al. (U.S. Patent No. 5,312,456) in view of Coates (U.S. Patent No. 4,219,019).

Reed et al disclose a skin – attachment member as discussed above. With regard to Claims 14 and 15, Reed et al. fail to disclose a skin attachment member comprising polyethylene terephthalate.

Art Unit: 1772

Coates teaches that polyethylene terephthalate is notoriously well known in the art in the making of bandages (column 5, lines 14 - 19), since polyethylene terephthalate possesses bulk and conformability in the bandage art (column 1, lines 60 - 63). The desirability of providing for polyethylene terephthalate in Reed et al, which is a bandage, would therefore have been obvious to one of ordinary skill in the art.

It therefore would have been obvious for one of ordinary skill in the art at the time

Applicant's invention was made to have provided for polyethylene terephthalate in Reed et al. in order to make bandages which possesses bulk and conformability as taught by Coates.

## ANSWERS TO APPLICANT'S ARGUMENTS

7. Applicant's arguments regarding the 35 U.S.C. 112 second paragraph rejection of Claim 19, of record on page 2 of the previous Action, have been considered and have been found to be persuasive. The rejection is therefore withdrawn.

Applicant's arguments regarding the 35 U.S.C. 102(b) rejection of Claims 4, 10, 16 – 17, 19 – 20 and 23 as being anticipated by Reed et al. (U.S. Patent No. 5,312,456), 35 U.S.C. 103(a) as being unpatentable over Reed et al. (U.S. Patent No. 5,312,456), 35 U.S.C. 103(a) rejection of Claim 13 as being unpatentable over Reed et al. (U.S. Patent No. 5,312,456) in view of Fye (U.S. Patent No. 5,031,609), and 35 U.S.C. 103(a) rejection of Claims 14 – 15 as being unpatentable over Reed et al. (U.S. Patent No. 5,312,456) in view of Coates (U.S. Patent No. 4,219,019), of record in the previous Action, have been considered but have not been found to be persuasive for the reasons set forth below.

Page 8

Application/Control Number: 09/440,384

Art Unit: 1772

Applicant argues, on page 5 of Paper No. 23, that Reed et al fails to teach an array of skin penetrating elements which is formed integrally from a single plastic resin because the etching techniques used by Reed et al could not be used to form overhanging barbs using a single plastic resin. However, as stated on page 3 of the previous Action, the skin penetrating elements disclosed by Reed et al are integral with the backing are made of a rigid material comprising plastic; the claimed aspect of the 'array of skin penetrating elements' being formed 'integrally from a single plastic resin' therefore reads on Reed et al.

### Conclusion

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Marc Patterson, whose telephone number is (571) 272 – 1497. The examiner can normally be reached on Monday through Friday from 8:30 AM to 5:00 PM. If attempts to reach the examiner by phone are unsuccessful, the examiner's supervisor, Harold Pyon, can be reached at (571) 272 – 1498. FAX communications should be sent to (703) 872-9310. FAXs received after 4 P.M. will not be processed until the following business day.
